## Re: Software Engineer: Test (SDET) — AI-Augmented Automation & Testing-Pyramid Depth

Dear Hiring Team,

I'm applying for the Software Engineer: Test (SDET) role on the Risk Cloud platform. I'm a Senior SDET and QA Automation Lead with 25+ years testing and shipping software — SDET roots at RealNetworks, Microsoft, and IBM, then five years leading QA remotely at Knowledgecity (Dec 2020 - Aug 2025). Here's what that means for your team:

Risk Cloud has to be the most reliable system in the room — I build the automation that earns that. As test automation lead at Knowledgecity I owned the CI/CD quality pipeline (Apache, REST, SQL, AWS, React) with Cypress, Selenium, Postman, and JUnit: API and integration layers first, end-to-end regression on top, health dashboards and alerting underneath. That delivered dependable releases across performance, load, database, security, and accessibility testing while technical debt fell — and with TypeScript, JavaScript, and Node as my daily stack, your TypeScript + Playwright suite is a direct transfer.

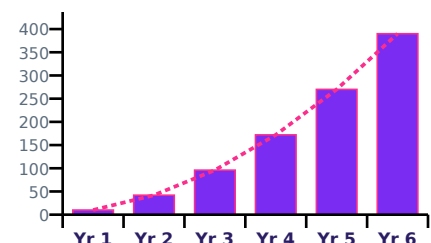

I treat AI the way your posting does — core to the craft, verified, never trusted blindly. I helped ship an AI support chatbot on RAG retrieval with guardrails alongside SOC 2 work, made AI-generated-code evaluation a shipped-product practice, and now build agent infrastructure on the 32.8k-star ZeroClaw gateway. Your team gets faster test authoring and regression triage, with every generated assertion checked before it gates a deploy.

I cover the operational half too: isolating distributed failures from logs and API data via Blue Team forensics and Elasticsearch-backed alerting, managing test data across SQL, REST, and AWS flows, and documenting it all in Confluence and Qase runbooks. As Integrations Product Owner I estimated and unblocked Agile sprints while hiring, training, and pairing with analysts until manual regression became automated coverage. GRC is familiar ground — I'm a former elected county water board president versed in governance and audit.

### What I bring to Risk Cloud:

- **Automation & pyramid.** Cypress, Selenium, Postman, JUnit; CI/CD regression suites with dashboards and alerting; TypeScript/JavaScript/Node — Playwright-ready.
- **AI-augmented testing.** RAG + guardrails shipped; AI-code evaluation in production; agent/MCP infra on a 32.8k-star gateway.
- **Debugging, data & docs.** Log/API triage, Blue Team forensics; SQL/REST/AWS test data; Confluence/Qase runbooks.
- **Enablement & GRC fit.** Hired and trained an automation team; Agile Product Owner; SOC 2 + elected-board governance.

The Value of Hiring Eugene

Risk Cloud earns trust by limiting surprises — my pyramid-first coverage, AI-accelerated authoring and triage, and automated-vs.-manual dashboards do the same. Remote-ready after five years leading QA remotely; happy to walk through a regression-suite design or any PR.

Best regards,

**Eugene L. Buchanan**
