Re: Senior AI Engineer — Agentic AI, RAG, LLM Orchestration and Routing

Dear TechDigital Hiring Team,

I'm applying for the Senior AI Engineer (Agentic AI, MCP, RAG) role in Dearborn. You need agentic workflows, RAG knowledge systems, LLM orchestration, and MCP context management.

I author `herdr-mcp` (github.com/eugeneb50/herdr-mcp): agents had no MCP path into `herdr` terminal workspaces, so I built a Rust MCP server exposing the multiplexer as 51 tools.

It runs MCP stdio for Claude Desktop, Cursor, Claude Code, Continue, and OpenCode, plus an HTTP bridge serving a React playground for running tools and chaining recipes.

Result: repeatable multi-step agent work through a recipe engine, cron scheduler, and trim pipeline — 299 tests passing across a 4-crate workspace.

At Knowledgecity (Dec 2020–Aug 2025) support needed grounded answers over scattered enterprise content, so I helped ship a RAG chatbot with guardrails that cleared SOC 2 review.

Six platforms, six auth dialects: I shipped SAP, Oracle, Workday, Coursera, UKG, and Zoom over SAML, OAuth, SFTP, REST APIs, and webhooks.

Result: deployments gated by CI/CD pipelines with health dashboards and alerting — deploy, monitor, and govern.

On ZeroClaw's 32.8k-star Rust gateway, routing and cost data were scattered across 9 providers — PR #7946 unified them behind one context-window source of truth (merged Jul 2026).

Fallbacks then misattributed usage and cost, so PR #8966 put live serving-provider identity on every usage event with a per-attempt ledger (merged Sep 18, 2026, 94 commits).

Agent state was invisible to operators, so PR #8337's lifecycle observer fed the vendor-neutral design.

What I bring from day one is the builder mindset: grounded retrieval, honest context, and every fallback accounted for — plus 25+ years shipping production systems.

I am open to onsite work in Dearborn, MI, and welcome the chance to dig into your agent stack.

How I fit this role:

- **MCP server, authored.** herdr-mcp: 51 tools, HTTP bridge, React playground, recipes, scheduler, 299 tests.
- **Agentic workflows.** Lifecycle observer, usage ledger, retry/recovery across a 32.8k-star gateway.
- **RAG knowledge systems.** RAG chatbot with guardrails under SOC 2; Elastic/SQL search; trim pipelines.
- **Deploy, monitor, govern.** Regression dashboards and alerting; CI/CD gates; Blue Team and SOC 2 practice.

Value: Grounded, Routed, Governed

Enterprise agents only earn trust when retrieval is grounded, context is honest, and every fallback is accounted for. That is what I build — happy to walk through any ZeroClaw PR or Knowledgecity integration decision in an interview.

Best regards,

Eugene L. Buchanan
